

Design 1 Stage 1

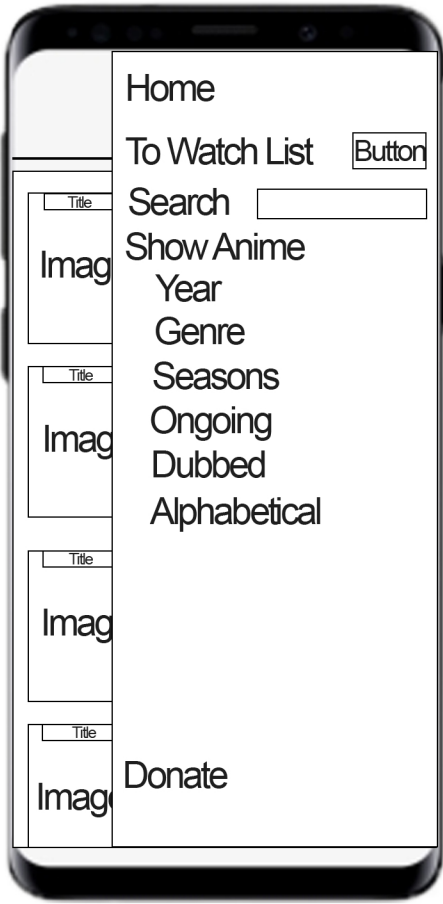

Index

This is the home page of the website. This design has the layout that would be best suited for the purpose of having large quantity of shows and make it appealing to the user by listing them in one page with using medium size images. My aim was to make a easy to navigate website.

The disgn will have a menu button in the top right corner to accoodate other features of the website.

However upon reviewing the design I can see there are three components missing; search bar, add to list button and footer. Therefore I ned to updated the design in later stage to make the website fully usable.

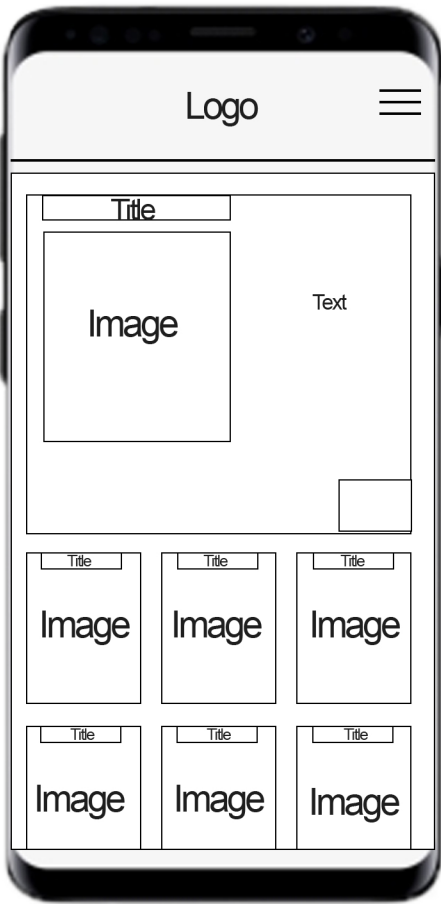

This shows how the menu looks once clicked, it shoul have some kind of animation to slide from right to left.

I have added search bar however I think it is not practical to have the search bar in the menu. This is because it is unusual and could confuse the user. Therefore I will be moving the search bar to the main page in further design stage.

I like how there are section in the menu which will pre filter the main page. However I would like to see an additional filter in the main page.

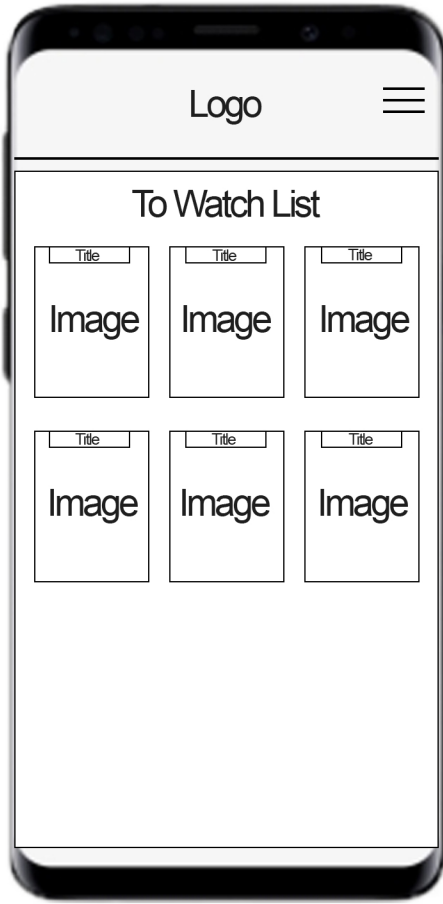

Lastly there is donation hyperlink which will implement paypal donation.

I have implemented animation as you click the individual images which would enlarge the image and move the row down or up depending which image is clicked.

In this enlarged section it will show more information about the show such as:

- number of seasons and episodes
- Larger image
- Description of the show
- Add button to add to watch list

This is the to watch list which the user creates when selecting shows to watch.

What is missing on this page is the ability to remove and rearrange the shows in order so that the user has the choice which shows to watch.
